

SESSION 10 • YEAR THREE — RESTORING & MAINTAINING IMPLANTS

Splinting Implants

When It Helps, When It Hurts, and Who
Decides

PRESENTED BY

Jonathan Misch,
DDS, MS

CEO, Misch Implant Institute

@drjmisch

Many dentists restore connected implant bridges without considering whether splinting was indicated — and sometimes it was the wrong call. We cover the biomechanical rationale, when splinting helps versus hurts, and why the decision belongs before the implant is placed.

LEARNING OBJECTIVES

- 01** Explain the biomechanical rationale for splinting implants.
- 02** Distinguish scenarios where splinting helps from where it harms.
- 03** Recognize why the splinting decision belongs before placement, not at the restorative phase.
