SESSION 02 • YEAR ONE — THE REFERRAL DECISION

Can My Patient Actually Get an Implant?

Demystifying Bone Grafting

PRESENTED BY

Jonathan Misch, DDS, MS

CEO, Misch Implant Institute

@drjmisch

'Not enough bone' is the most common reason general dentists screen patients out of implant candidacy before ever referring. We reframe the entire conversation — what ridge deficiency actually looks like, what bone grafting and sinus augmentation involve and what the patient experiences, and why the vast majority of 'not a candidate' patients simply need one additional step first.

LEARNING OBJECTIVES

01 Describe what ridge deficiency looks like clinically and radiographically.

02 Explain what bone grafting and sinus augmentation involve — and the patient experience of each.

03 Recognize why most "not a candidate" patients simply need an added step first, using realistic success-rate data.
