SESSION 03 • YEAR ONE — THE REFERRAL DECISION

Implant Dehiscence

When to Watch, When to Worry, and When to Refer

PRESENTED BY
Jonathan Misch, DDS, MS
CEO, Misch Implant Institute
@drjmisch

Soft-tissue recession and dehiscence around implants is increasingly common — and how to treat it is rarely clear-cut. We build a practical framework for when peri-implant recession can be managed purely restoratively, when it demands a surgical approach, and when it takes a combined surgical-restorative solution.

LEARNING OBJECTIVES

01 Recognize and grade soft-tissue dehiscence and recession around implants.

02 Identify when peri-implant recession can be corrected with a purely restorative approach.

03 Determine when surgery — or a combined surgical-restorative solution — is required.
