SESSION 04 • YEAR ONE — THE REFERRAL DECISION

BOP on Implants

When Does It Matter?

PRESENTED BY
Jonathan Misch, DDS, MS
CEO, Misch Implant Institute
@drjmisch

Every dentist who restores implants should probe them — but few know what bleeding on probing means in a peri-implant context. We cover the biological differences from natural teeth, how to read probing depth and BOP, and when to manage versus refer back.

LEARNING OBJECTIVES

01 Contrast the biology of peri-implant and periodontal tissue.

02 Interpret probing depth and bleeding on probing around implants.

03 Identify early peri-implant disease and when to manage versus refer back.
