SESSION 07 • YEAR TWO — UNDERSTANDING THE PROCEDURES

The Posterior Maxilla Isn't Off Limits

Sinus Augmentation Explained

PRESENTED BY

Jonathan Misch, DDS, MS

CEO, Misch Implant Institute

@drjmisch

The posterior maxilla is the most common reason GPs don't refer — because they've already told the patient there isn't enough bone. We cover crestal and lateral-window sinus augmentation, who needs which, the outcomes data, and the conversation to have before the referral call.

LEARNING OBJECTIVES

01 Differentiate crestal from lateral-window sinus augmentation and their indications.

02 Match each patient to the appropriate approach using outcomes data.

03 Frame the pre-referral patient conversation about posterior maxillary bone.
